

Ohio Rubber

April 10, 1986

Ms. Sandy Kausek
Ohio EPA
Northeast District Office
2110 E. Aurora Rd.
Twinsburg, OH 44087

Dear Ms. Kausek:

Enclosed are the final prints of the Ohio Rubber drainage systems which were promised by April 15, 1986.

I believe they satisfy your original request.

As for our high pH problem for which Brundage, Baker & Stauffer, Ltd. were hired to identify the source(s), this was completed by March 15, 1986 as originally scheduled.

We now have the problem of eliminating or controlling the sources of the high pH. Two sources identified were causing occasional high peaks. One has been blocked off and we are currently fabricating controls to eliminate the second which should be completed by May 15, 1986. The last source identified was our boiler room which is causing the steady readings between 9 and 10. We have purchased a pump and chemicals with which it is our intent to set up a neutralization program to control the pH of the water being discharged. Our target date for completing this is June 15, 1986.

Also, I have hired a new man to take over Conrad Hornung's position and he will be on board as of April 21, 1986. I will be sure to bring him down to meet you folks after he gets his feet on the ground.

Sincerely yours,

E. Paul Robbins
Employee Relations Manager
